Date:

January 24, 2001

Subject:

Audit Report on Criminal Investigations Division (#0110)

We have completed an audit of the Criminal Investigations Division (#0110). We submit this report that contains our audit issues and recommended actions and the response from the City Manager. We will periodically review the implementation of these recommended actions.

We thank the staff of the Tallahassee Police Department for their cooperation and assistance during this audit. If you have any questions or need a more detailed briefing on this audit, please contact me.

Respectfully submitted,

Jam m. mª Call

Audit Report

Criminal Investigations Division

Report #0110

January 24, 2001

Executive Summary

The primary purpose of this audit is to determine whether there are 4,000 outstanding solvable cases in selected units of the Criminal Investigations Division (CID) of the Tallahassee Police Department (TPD) that should be assigned for investigation. We also analyzed clearance rates for comparable cities and sought to determine if the CID has established goals, objectives, and performance measures that can be used to measure the effectiveness of the Division.

Although We Were
Unable to Verify the
Number of Secondary
Cases Reported by
CID, We Agree With
the Classification of
These Cases as
Having Minimal
Solvability

In March of 2000, sergeants of the CID estimated that approximately 4,000 "secondary" cases were not assigned for investigation during 1999 because of minimal solvability factors and limited resources. Because these cases are active and changing daily, we were not able to verify the above number of cases. We reviewed a sample of cases that were not investigated, and we agreed with the sergeants that, given available information and limited resources it was more cost effective to not review these cases.

We reviewed summary statistics for selected units of the CID for the period January 1999 to June 2000. We noted that the average number of cases assigned to investigators had increased from 22 to 41, and the number of outstanding cases increased from 288 to 643. We also noted that the

number of cases cleared by arrest or warrant had increased from 124 to 169, and the overall clearance rate had remained approximately the same. However, the CID has not established staffing standards to assist in the determination of the need for additional investigators.

The City Commission approved three new investigators for the 2000-2001 fiscal year. CID should establish staffing standards and monitor the staffing standards to identify the need for additional investigators.

Case Clearance Rates
Have Increased and
Compare Favorably
With Comparable Cities

To evaluate current practices of the division, we reviewed case clearance rates, a measure used to indicate the performance of police units. We found that the case clearance rate for TPD was very favorable when compared to six comparably sized cities.

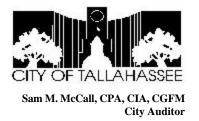

CID Needs to Establish
Case Management
Policies and
Procedures

We further identified the need to establish Division policies and procedures regarding case management practices.

CID Needs to Establish Additional Performance Measures, Goals and Objectives We identified the need for the division to establish goals and objectives that would be consistent with those of the department. We also identified the need to establish additional performance measures that could be used by management to justify staffing and monitor Division performance.

Generally, we believe that the CID is focusing on and placing priority on those cases with the highest likelihood of being solved or that require further investigation. We wish to thank the staff of the CID and TPD for their assistance during our review.

Audit Report

"Criminal Investigation Division"

Report #0110

January 24, 2001

Purpose

The purpose of the audit was to:

- determine if the 4,000 cases identified as outstanding cases are solvable cases and should be assigned for investigation;
- evaluate measures collected by the Criminal Investigations Division (CID) of the Tallahassee Police Department (TPD) by reviewing definitions, consistency with other police departments and recommended measures, and consistency and reliability within the Division;
- evaluate the consistency and reasonableness of case management procedures; and
- evaluate goals established for the CID.

Scope,
Objectives,
and
Methodology

The period under review was from January 1999 through June 2000 and was limited to the Homicide, Robbery, Auto Theft Task Force, Pawn Shop, Financial Crimes, Juvenile Protection/Sex Crimes, and Burglary units of the CID.

We identified case statistics and time and attendance information collected and reported by each of the units and analyzed the information for consistency, relevancy, and accuracy. We also compared the information to measures recommended by the Governmental Accounting Standards Board (GASB) and information collected from other comparable police departments.

We interviewed supervisors to determine case management procedures and reviewed selected cases to evaluate case management practices.

We evaluated goals established by the department and the CID.

This audit was conducted in accordance with generally accepted government auditing standards, and accordingly included such tests of the records and other auditing procedures as were considered necessary.

Background

The CID is responsible for following up on criminal complaints reported to the TPD. The Division is managed by one captain and two lieutenants. Each of the units we reviewed is supervised by a sergeant.

Figure 1 shows the units included in the CID and those included in our review.

4

Questions to be Answered

The questions to be answered in this report are:

- 1. Are there 4,000 outstanding solvable cases that should be assigned for investigation?
- 2. How do TPD clearance rates compare to other cities?
- 3. Has the Division established consistent and reasonable case management procedures?
- 4. Has the department established goals and performance measures for CID and each of the units in the Division, and are the performance measures consistent with other police departments and those recommended by the Governmental Accounting Standards Board (GASB)?

Are there 4,000 Outstanding Solvable Cases That Should be Assigned for Investigation? The sergeants review the cases assigned to their unit for solvability factors and, based on the factors, either assigns the case to an investigator or files the case by date. The different solvability factors used by CID include:

- Can a suspect be named or identified?
- Is significant evidence present?
- Can a suspect's vehicle be identified?
- Were there witnesses to the crime?

Filing the case by date keeps the file open and available so that if additional information becomes available the case can be assigned for investigation. Cases include:

- pranks or petty theft, such as stealing a plant off the front porch, or
- burglary or car theft.

The date file contains two types of cases: "Non-assignable" and "Secondary." Non-assignable cases are those without any solvability factors, whereas secondary cases contain minimal solvability factors. The sergeants estimated in March of 2000, that there were approximately 4,000 secondary cases during 1999. We were unable to verify the number of secondary cases during our review since date file cases are constantly changing. Each day, cases are evaluated by the sergeants and assigned either to the date file or for further investigation based on the solvability factors

in the case. Date file cases are also periodically purged so the number of cases changes daily.

A non-assignable case does not contain any solvability factors, and this prevents investigation leads from being developed. Secondary cases contain very minimal information on the factors. A case with minimal solvability factors has a low percentage for disposition by arrest or some other manner.

We Agree That Many Cases Have Either No or Minimal Solvability Factors

We reviewed a sample of date file cases and confirmed that these cases contained either no solvability factors or minimal factors, making solvability problematic. We agreed with the sergeants in their designation of these cases as non-assignable or secondary cases.

Resources Should be Directed Towards Assignable Cases

While we were unable to determine if the number reported (4,000) as secondary cases was correct, we feel that there are some cases that, if given additional investigation, could result in a disposition. We also feel that with available information and limited resources, it is more cost effective to direct those resources towards assignable cases that have the greatest likelihood of a disposition. Assigned cases can be classified or resolved as follows:

- Arrest when at least one person is arrested and charged with the crime
- Warrant when an arrest warrant has been issued for a suspect associated with the crime
- Exceptional Cleared a method used to clear the case when:
 - there is reason outside of law enforcement control that doesn't allow arresting, charging, and prosecuting the offender;
 - exceptional means are the death of the offender, the victim's refusal to cooperate, and denial of extradition;
 - in all exceptional clearance cases, law enforcement must have identified the offender, must have sufficient evidence, and know the offender's location.

- Suspended disposition is not possible due to investigative leads being exhausted
- Unfounded when investigators clearly establish that no offense occurred or was attempted or the reported offense was false or baseless
- Open an assigned active case

Figure 2 shows the number of cases referred for investigation during 1999 and their status.

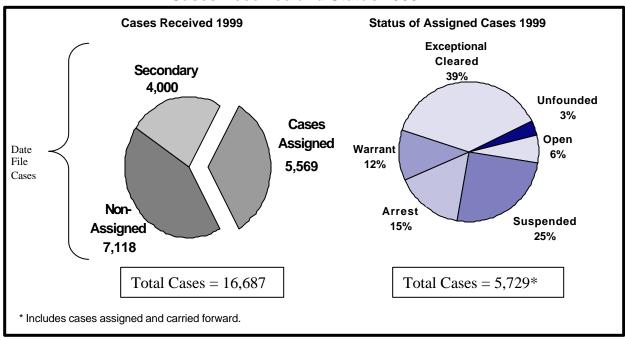

Figure 2
Cases Received and Status 1999

As shown in Figure 2, over 11,000 cases were placed in the date file and did not receive further investigation. These cases are classified as secondary (4,000) or non-assignable (7,118) cases. The sergeants report that the secondary cases had some minimal solvability factors but were not assigned to investigators due to limited resources.

In addition, we reviewed monthly performance information from each unit for the period January 1999 to June 2000 to examine staffing ratios. We interviewed each of the sergeants to obtain their opinions regarding staffing needs. The sergeants expressed the need for additional resources

to further investigate these secondary cases but felt that with current resources the assigned cases should receive priority.

Detailed monthly performance information and staff time and attendance statistics are provided in Appendix B. We have also included some ratios that could be used to analyze trends in the data.

TPD Management's
Action to Address
Secondary Cases
Should be Discontinued

During our review, upper management established a policy requiring that a minimum of 25 cases (assignable, secondary and non-assignable) be assigned to each investigator per month. As shown in Figure 3, we noted increases in the number of cases assigned to investigators in May and June of 2000 as a result of the implementation of this policy.

2000
1800
1400
1200
1000
800
600
400
200
0
Months
— Cases Received — Cases Assigned

Figure 3
Cases Received and Assigned

Based on our review, we concluded that the best use of limited investigator resources would be to investigate only those cases deemed as solvable. We do not believe that the 25 case per investigator per month requirement recognizes the workload of the units and the investigators or the solvability of the cases. Therefore, we recommend that this

requirement be discontinued. While we understand the desire of the sergeants to investigate all cases to the fullest extent, we do not believe that sufficient resources are currently available for this purpose. Thus, the investigation of the outstanding secondary cases does not appear to be an efficient use of limited investigation resources.

Additional Investigators May be Needed to Meet Increasing Workload

As we noted above in Figure 3 there was an increase in the number of cases assigned to investigators from 22 to 41, we also noted an increase in the number of FTE investigators over this same period from 30 to 36. Staffing levels would normally be based on generally accepted staffing standards or ratios. However, the CID has not established these staffing ratios for each unit or the CID as a whole.

The City Commission approved the addition of three investigators for the 2000-2001 fiscal year.

While each of the sergeants we interviewed indicated the need for additional investigators, the elimination of the 25 case per investigator per month requirement and the additional investigator positions may reduce the need for additional investigators at this time.

The CID should establish staffing ratios for each unit that could be used to determine future staffing needs and identify those areas that need temporary assistance.

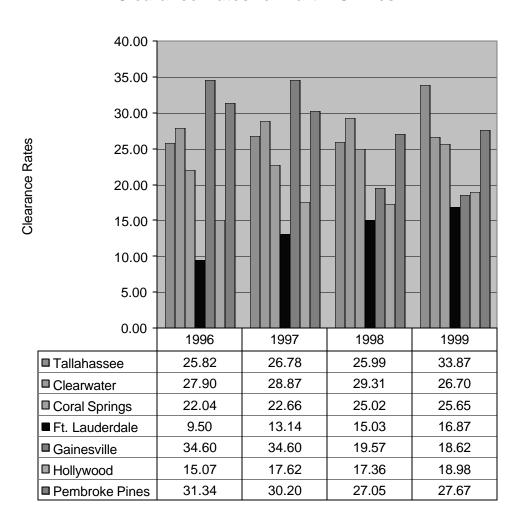

How Do TPD Case Clearance Rates Compare to Other Cities?

Comparing case clearance rates is one method used to compare performance among police departments. We looked at how TPD compared to other comparable police departments in Florida by comparing crime clearance rates with six cities of similar size. For the purpose of our comparison, we used "part 1 crimes" as defined by the Federal Bureau of Investigation and collected by the Florida Department of Law Enforcement (FDLE). Part 1 crimes are reported to FDLE annually by all police jurisdictions in the state and represent serious crimes that are most likely to be reported and most likely to occur with sufficient frequency.

TPD Case Clearance Rates Compare Favorably with Other Cities

As shown in Figure 4, we found that the case clearance rate for TPD has increased significantly over the past four-year period. The case clearance rate for TPD was very favorable when compared to six comparable cities.

Figure 4
Clearance Rates for Part 1 Crimes

Has the CID
Established Case
Management
Policies and
Procedures?

Internal Control Guidelines (APP #630) identifies administrative directives such as policies and procedures as control activities necessary to communicate management philosophy and operating style and assign authority and responsibility to employees. Currently the CID does not have standard operating procedures to collect and report performance measures within the CID. Lack of effective

policies and procedures increases the risk that controls are circumvented or performed incorrectly due to employee turnover or a change in employee responsibilities.

CID Needs to Establish
Case Management
Policies and Procedures
to Ensure Consistency

Our review of case statistics and time and attendance information reported by each of the units and our interviews with each of the sergeants indicated a general consistency of treatment among the units. To ensure that management's operating style and the employee's level of authority and responsibilities are appropriately communicated, we recommend management establish standard operating procedures within the CD. (See action plan in Appendix A.) These procedures will help strengthen controls within the Division in the event of employee turnover or restructuring of job responsibilities.

Have Performance Goals Been Established for CID and each Unit in CID?

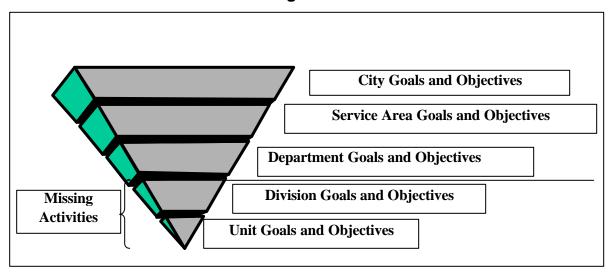

Internal Control Guidelines - Administrative Policy and Procedures (#630) indicate that activity level objectives should be linked to department wide and citywide objectives to enhance control activities. The department has established high level goals, but specific goals and objectives for the CID have not been established. Establishing goals and objectives would strengthen operations and increase the effectiveness of the Division's internal control system.

Figure 5 shows the relationship that unit goals and objectives have with division, department and City goals and objectives.

The higher up in the organization, the fewer and broader the goals and objectives. The City's goals are supported by departmental goals. This structure allows each employee to relate individual unit goals to those of the City.

Performance measures on the other hand provide managers tools for monitoring the quality, effectiveness, and efficiency of services provided by the Division. These measures help strengthen internal controls and promote accountability and stewardship within an organization.

Figure 5

The City's Internal Control Guidelines (APP #630) recognize the importance of performance measures by stating that "performance indicators that relate different sets of operations or financial data to one another be periodically analyzed." These guidelines also require managers to link activity level goals and objectives to department wide and citywide goals and objectives to ensure: consistency, relevance, specificity of objectives, adequacy of resources to meet the objectives, and involvement of all levels of management in setting the objectives.

Additional Performance Measures, Goals, and Objectives Need to be Established for Each of the Units in CID

Criminal Investigations management (Captain, Lieutenant, and Sergeants) needs to establish additional goals, objectives, and performance measures with their associated definitions to measure the quality, effectiveness, and efficiency of services provided by the CID. Management can then monitor and evaluate the effectiveness and efficiency of services provided by the Division.

Currently the performance data collected by the Division measures the efforts expended and quantity of services provided within the CID. For example, the number of cases cleared and the number of crimes investigated are reported. These performance indicators are currently being reported by CID and are recommended by the Governmental Accounting Standards Board (GASB). Measures reported by CID include:

Input Measures:

Number of Investigators Available Person hours

Output Measures:

Cases Investigated Number of Arrests Cases Cleared

Additional measures recommended by GASB that apply to CID can include:

Input Measures:

Number of Assigned Cases per Investigator Average Work Hours per Investigator Average Number of Cases Received per Investigator

Output Measures:

Average Hours per Cleared Case Average Number of Hours per Case Assigned

Outcome Measures:

Percentage of Cases Cleared Citizen Satisfaction Crimes Committed per 100,000

Management Should Work With Each Unit to Develop Measures to Monitor Division Performance Appendix B contains various statistics used by the TPD. We have summarized these statistics and have added some ratios to provide management with some additional indicators of performance. This appendix has been discussed with TPD management.

To provide management an effective tool for managing Division performance, the measures implemented should also present the results of the efforts or outcomes and whether the services help accomplish the goals and objectives of the division and department. Such measures can assist management in identifying potential or existing problem areas, determining the degree to which objectives have been met and the quality of services being provided,

and measuring division accomplishments in relation to resources used. We recommend that management work with each unit to develop performance measures and definitions to monitor the activities of the units. (See action plan in Appendix A.) The Division should implement these measures within the CID units to assist in their efforts to monitor division performance. Also, when implementing these measures, management should ensure the measures are appropriately linked to and aid in the accomplishment of division-wide, department-wide, and citywide goals and objectives. We have included in Appendix B some additional performance measures that could be used by the CID.

Appendix A contains an action plan to address the issues raised in this report.

Response from City Manager

I would like to express my appreciation to the audit staff for their efforts. I have reviewed the audit report in detail and found the report to be balanced and fair. I appreciate the recommendations regarding more consistent and reliable performance measures, and the improvement of control processes within the Criminal Investigations Division.

Staff of the Criminal Investigations Division have met with the audit staff and reviewed the recommended Action Plan. During fiscal year 2001 we anticipate the completion of a comprehensive manpower study. Based on the results of this study a timetable will be established for the completion of the individual recommendations within the Action Plan, and submitted to the Auditor's Office.

Copies of this audit report #0110 (project #0016) may be obtained by telephone (850 / 891-8397), by FAX (850 / 891-0912), by mail or in person (City Auditor, 300 S. Adams Street, Mail Box A22, Tallahassee, FL 32301-1731), or by e-mail (dooleym@mail.ci.tlh.fl.us).
